

The AI helper in Boord Owner

You can now ask the app questions in your own words — and it answers from your own farm's figures. This page explains what it does and how to use it.

The short version. Look for the box with the little sparkle ✨ that says "**Ask AI ...**". Tap a suggestion, or type a question like you would ask an advisor. The answer appears in a few seconds. **It only reads and explains — it never changes anything in your estimate.**

Where to find it

- **Estimate tab** — "Ask AI about this estimate", plus two buttons: **Check before I save** and **What changed?**
- **Weather tab** — "Ask AI about this weather" (under the chart), which also knows the forecast for your farm.
- **Dashboard** — **Today's season brief**, a short paragraph written for you every day.

Estimate tab

Ask AI about this estimate. Tap a suggestion or type your own question. For example:

Review this estimate

Which blocks look out of line with their history?

Are we on track?

How does it compare with the weather model?

Under an answer you can tap **Why?** or **Say that in fewer words**, copy it, or **Add to notes** to keep it with this version.

Check before I save. Press it before you save. The app looks at every block and puts a small coloured badge on the ones that look unusual compared with that block's own past seasons. Tap a badge to read why, and what range its history supports. Nothing is changed — you decide.

What changed? When a season has two saved versions, this tells you in words what moved between them and why it matters.

Weather tab

Tick the years you care about, then ask. For example:

How does this year compare with other years?

What does the forecast look like this week?

Is there frost or heat in the forecast?

How much rain have we had in the last 7 days?

It knows the years you ticked, every other year on file, the last 7 days and the next 7 days of forecast. A forecast is a best guess — it is least reliable beyond about three days.

Dashboard

Today's season brief is one short paragraph, written once a day: how picking is going against your estimate, how the weather model has moved, and a block or two worth walking. Tap **Refresh** for a new one.

Good to know

- **It can be wrong.** Your own eyes in the orchard come first. If it names a season or block that isn't on file, a note appears under the answer — check it against the table.
- **It only reads.** It never changes an estimate. Nothing is saved unless you press Save yourself.
- **What it sees.** The figures on the screen (and your notes on the Estimate tab) go from the farm server to the AI service. Workers, suppliers and crate details are not sent, and the farm's GPS position is not sent either.
- **A daily limit.** There is a limit on how many questions can be asked each day. The number used shows at the top of the box.
- **Ask in your own language.** It answers in the language of your question.

If it doesn't work

- If the box says **"Not set up on the farm server yet"**, ask whoever looks after the server — it needs a key added once.
- If you see **"The farm server can't be reached"**, check your phone is connected the same way as for the rest of the app.

- If an answer seems odd, tap **Why?** or ask it again in different words.
